Market Profile: SOUTH AMERICA

Background

.....

This profile contains inbound traveler volume, spending, and profile trends for residents of countries in South America who visited the United States. Inbound profiles contain data from 1997 through the most current year, depending on availability and sample size limitations. This profile available on the travel.trade.gov website always contains the most recent new or revised data available. Percentage-point and percentage changes are based on non-rounded data.

Traveler volume is based on the I-94 arrival and departure record, in either electronic or paper format, issued by a U.S. Customs and Border Protection (CBP) Officer to a foreign visitor entering the United States. The I-94 record is the only source for overseas (air, land, and sea) and Mexico-Air non-resident arrivals to the United States. For details on this program, please visit: <https://travel.trade.gov/research/programs/i94/index.asp>

Traveler spending is based on the Department of Commerce, Bureau of Economic Analysis Balance of Accounts system. International standards now use a broader definition of "travel" than previously used, and now adds a) education-related travel, b) health-related travel, and c) expenditures on goods and services by border, seasonal, and other short-term workers. All traveler spending (export) data shown in this profile use the new definition. For details on this program please visit: <https://travel.trade.gov/research/reports/recpay/index.asp>. For more information on definition changes, visit: <https://travel.trade.gov/pdf/restructuring-travel.pdf>

Traveler profile characteristics are based on the *Survey of International Air Travelers* (SIAT), a primary research program that provides visitor travel, trip and demographic characteristics. It is also a source of data used to estimate travel and passenger fare exports, imports and contributions to GDP for the U.S. government. The SIAT examines both non-resident overseas and Mexican air visitors to the United States and U.S. residents traveling overseas or to Mexico. The survey questionnaire was revised beginning with 2012 data. All data are shown in this profile as available regardless of whether question items were added, deleted, or modified beginning in 2012. The arrangement of question items varies across the tables. This profile shows only a portion of the 40 travel characteristics data reported on international travel to the U.S. Additional information may be obtained for a fee. Survey Respondent Sample Size and Volume Estimates

	2000	2005	2010	2012	2013	2014	2015	2016	2017
Respondents	2,677	1,588	3,272	5,021	5,201	8,578	8,660	7,603	5,837

Note: Survey respondent sample size reflects the total number of questionnaire records meeting the profile definition. Sample size for specific questions may be less than those shown above due to varying question response rates. All profile data are weighted by "Total Arrivals" visitor volume shown at the top of this page (*person-trips*), and thus 1) traveler profile segment volume can be estimated by multiplying the profile percentage for a given year by the Total Arrivals volume above; and 2) by implicit assumption, the total travel party has the same characteristics as the survey respondent (e.g. same trip purpose, same activities, same travel experience, etc.).

Notes: Only country and world region destinations having a sample size consistently of 100 or more are displayed. Visitation incidence was rounded to two decimal places in NTTO source files beginning in 2014 to reduce artificial 'jumpiness' in the data caused by rounding to only one decimal places, especially for destinations having incidence of less than two percentage points. Due to quarterly data weighting by country and port of entry, some unreported destinations may have a higher proportion of total than those reported.

Note: The proportions in this *U.S. Port of Entry* table, like other data in this profile, represent survey findings weighted by actual known volumes from each country for each U.S. port of entry. These proportions may differ slightly from those in the data used for weighting because not all ports of departure (typically, but not always the same as the port of entry) are used as survey locations. Travelers who departed one of these non-surveyed airports are unlikely to be represented in this table.
